	25 X
The major risks for Iran are that it could lose much of its remaining war materiel, considerable manpower, and possibly even the option of major offensives in the near future. The Iranians have been slow and deliberate in their preparations east of Amarah, in an apparent effort to avoid repeating their costly defeats near Basrah last year in which they lost substantial men and equipment and made no significant gain.	25X
Nonetheless, the Iranians almost certainly will incur high casualties. The extra time Iran has taken to prepare its offensive has been used by the Iraqis to strengthen their forces and physical defenses in the area. If Iran's territorial gains near Amarah are not sufficient to justify substantial losses, the Iranian leadership may be forced to forgo large-scale offensives in the future. The probable consequence initially would be a war of attritionartillery duels and skirmishes along the border. Meanwhile, the leverage of those officials in Tehran who argue for greater Iranian receptiveness to negotiating initiatives of	05.
Algeria and others presumably would be strengthened.	25X ⁻
Balance of Forces	
Since last July, the weight of Iran's forces has shifted north from Basrah toward the Doveyrich River area some 60 kilometers east of Amarah. Additional forces have been brought from the Qasr-e Shirin and Sumar areas in the north. Iran probably has assembled at least 120,000 regular and irregular troops east of Amarah. The Iraqis have over 100,000 men to defend against the impending offensive.	25X ⁻
In the buildup area, the Iraqis are superior to Iran in every category of military equipment; for example, they have an advantage of at least two-to-one in armored vehicles and artillery. Iraq also has	25 X 1
of defending from prepared positions. In addition, the Iraqis can call on an inventory of operational combat aircraft more than	
four times larger than Iran's.	25X ²
Iranian Forces	
East of Amarah Iran has concentrated an armored division, an infantry division, and three independent brigades. A fourth brigade is being held in reserve. The Iranians have some 60,000 regular troops, at least 350 armored vehicles, and 125 artillery pieces in the area. In addition,	25 X 1
Revolutionary Guards are there The Guard units, along with the militia	20/(1
volunteers, number at least 60,000 troops and, as in the past, probably will be used for spearheading the assualt. Iran seems to be planning a mobile attack; large numbers of armored vehicles and self-propelled artillery are being moved to the front.	25 X 1
and the property and seeing moved to the front.	25X ²

	Iraqi Vulnerabilities	
	The Iraqi defensive positions suffer from potentially serious weaknesses.	
	The local IV Corps commander	25
	has a poor combat record.	25
		25
	Half the Iraqi units now on the front lines east of Amarah are militia, reserve, or newly formed units. In the past, many militia and reserve units have collapsed under fire leading to Iranian breakthroughs.	_
	-	2
	Unlike the relatively restricted area east of Basrah, the Iraqis at Amarah are forced to defend a broader front possibly allowing the Iranians to achieve tactical	
	surprise and slowing the arrival of Iraqi reserves.	
(1		25 X 1
	Outlook	
	We estimate that Iran's chances are good for advancing at least several kilometers into Iraq at a few locations along the front. A breakthrough to Amarah is much less likely because of Iraq's firepower advantage, greater mobility, superiority in the air, and ability to funnel reinforcements into the battle. Iran could claim victory after achieving small advances, but for Iraq, success would require preventing a breakthrough while inflicting casualties massive enough to force Iran to abandon additional	
	offensives.	-
	The fighting probably will spark a new round of Iraqi air attacks against Iranian shipping in the Gulf, and possibly the oil loading terminal at Kharg Island. Occasional Iraqi attacks against Khargthe latest of which occurred on 17 Januaryhave failed to inflict significant damage. The Iranians now are exporting about 2 million barrels of oil a day from this	
	terminal.	2

	25 X ′
Two factors in this battle could significantly affect the	
ability of the two sides to continue the war after the engagement	
east of Amarah:	
For Iraq, crucial mistakes and declining troop morale	
could lead to an Iranian breakthrough, the rout of a	
major Iraqi unit, and substantial numbers of Iraqi	
casualties. This would shake the regime in Baghdad and	
leave it with a crippled military force unlikely to	
provide effective defense if Iran were to exploit its gains. Iraqi morale likely would decline rapidly if the	
Iranians achieved a significant breakthrough and Iraqi	
units found themselves outflanked, forced to retreat, or	
surrounded.	25X ²
For Inc.	
For Iran, severe losses of men and materiel in the	
impending offensive would degrade its ability to pursue the war and could preclude future offensives on the scale	
Of that being prepared east of Amarah. The high morale	
and fanaticism of Iran's infantry key factors in its	
past successeswere shaken by heavy casualties at Basrah	
in July 1982, some 25,000 casualties in two weeks.	25X
If territorial gains near Amarah are not significant enough	
to justify large numbers of casualties, the Iranian leadership	
may be faced with a population more reluctant to volunteer.	
Moreover, coupled with a military that cannot assure decisive	
victories, the leadership may be forced to abandon the hope that	
it can continue to stage large-scale offensives against Iraq that will ultimately topple the regime in Baghdad. In this situation,	
the war may continue as artillery duels and skirmishes along the	
border. Alternatively, such a situation could lead the Iranians	
to conclude that some advantage may be gained by showing greater	
interest in the negotiating proposals of Algeria and others.	25X
Peace Prospects.	25X1
